

HOW TO CONTROL SMART HOME DEVICES

This infographic explores the different options for smart home device control for people with disabilities. Please note that the information provided is a general description of potential control options, however, available features and compatibility vary by device.

DIGITAL ASSISTANTS

Available on

Digital assistants can be "built-in" or downloaded to these devices.

Will need to enable "skill" or "action" of a smart home device under the digital assistant app or link with a digital assistant under the smart home device app.

AUGMENTATIVE & ALTERNATIVE COMMUNICATION (AAC) DEVICE

AAC devices can be controlled with assistive technology devices or eye gaze.

AAC devices may have pre-made smart home boards and can provide voice commands to a digital assistant.

SMART HOME AUTOMATION

Can be customized in smart home device app and simplify smart home control.

Routines can be triggered by...

Time

Location

Sensors

Button

Device groups can be created based on rooms, device type, and more, allowing control of multiple devices all together with one touch or command.

SMART HOME APPS

Available on
